How to Use JS HUB

Set up your company, follow the workflow, and choose the right feature for each job. For businesses in the UAE and India.

Set up before your first invoice

Do these in order. Invoices can only use saved items, so items come before billing.

Step 1

Company profile

Legal name, address and tax number. Your invoices and tax returns print these details.

Step 2

Items

Everything you sell, with its price, tax rate and, in India, its HSN or SAC code.

Step 3

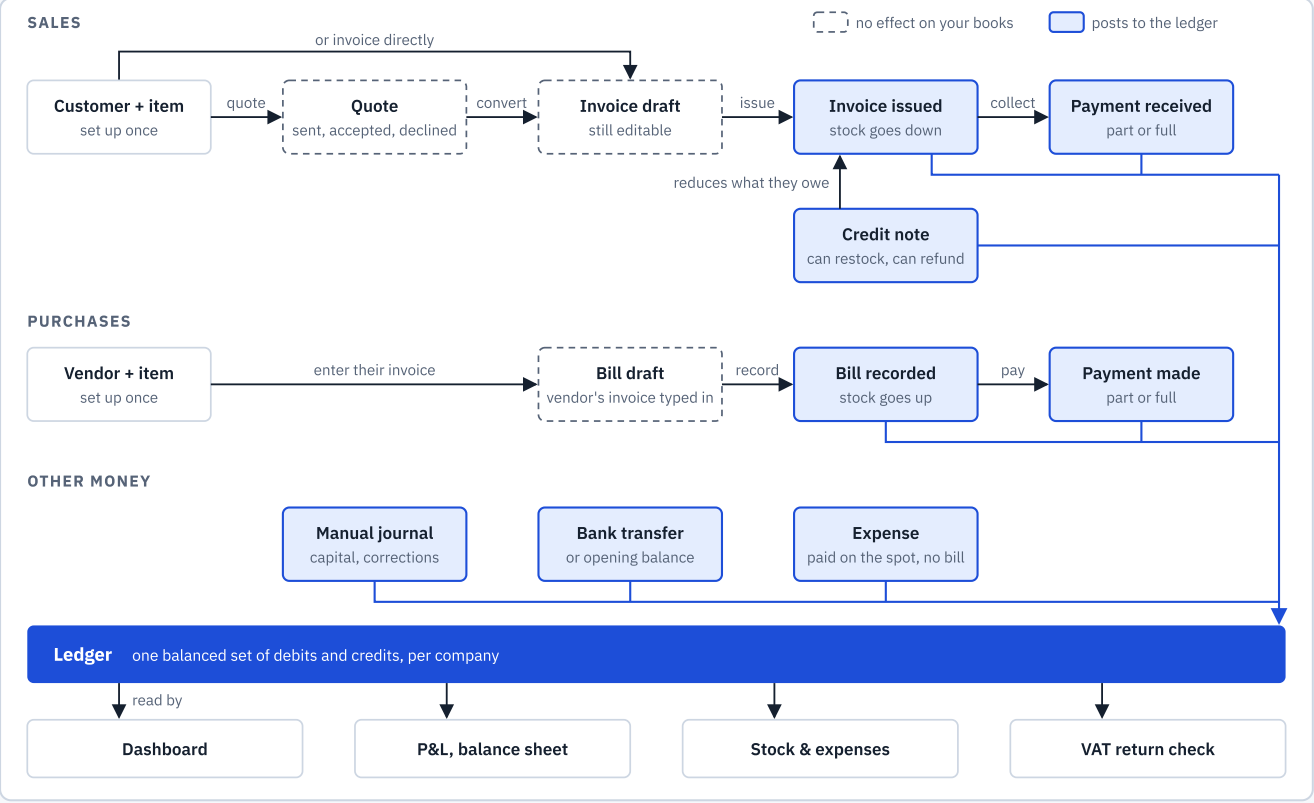

Customers and vendors

Their tax status and location decide how tax applies to them.

Step 4

Bank and cash

Add each account with its opening balance, so your cash figures start out right.

Drafts and quotes never touch your books. Your books change at the blue steps, and the financial reports read from that one ledger. The VAT return is built from your documents and compared with the ledger, so a mismatch shows up. On a phone, swipe the map sideways.

Quick finder

Find what you want to do, then use the feature beside it.

I WANT TO...	USE	FIND IT UNDER
Give a customer a price before they commit	Quote	Sales
Charge a customer	Invoice	Sales
Record money a customer paid	Record payment, on the invoice	Sales > Invoices
Reduce or refund a customer's invoice	Credit note	Sales
Enter an invoice a vendor sent me	Bill	Purchases
Record money I paid a vendor	Record payment, on the bill	Purchases > Bills
Record spending with no vendor invoice to track	Expense	Purchases
Add something I sell or buy	Item	Business
Move money between my own accounts	Transfer	Business > Banking
Match my books to a bank statement	Reconcile	Business > Banking
Record owner capital, depreciation or an accrual	Manual journal	Business > Accounting
See how much stock I have right now	Stock summary	Business > Reports
See what I spent, by category	Expense report	Business > Reports
See whether I made a profit	Profit & loss	Business > Reports
Prepare my UAE VAT filing	VAT return	Business > Reports
Change my company name, address or tax number	Company profile	Business

Sales

Use a quote while the customer is still deciding, and an invoice once they owe you. Only issued invoices change your books.

FEATURE	USE IT WHEN	DON'T USE IT WHEN
Quote	You're offering a price the customer can accept or decline.	The customer already owes you. Create an invoice.
Invoice draft	You're still preparing an invoice and may change it.	The invoice is final. Issue it.
Issue invoice	The invoice is final. This records the sale and tax, and takes tracked goods out of stock.	You don't have enough stock. The app stops you until stock is recorded.
Record payment	A customer paid all or part of an invoice.	The invoice is still a draft. Issue it first.
Credit note	You need to reduce an issued invoice for a return, refund or correction.	The whole invoice was a mistake with nothing paid or credited. Void it instead.

Every invoice, quote and credit note line uses a saved item. For a saved service, you can enter start and end dates, which print on the document.

Purchases

Use a bill when a vendor invoices you. Use an expense when you've already paid and there's no bill to track.

FEATURE	USE IT WHEN	DON'T USE IT WHEN
Bill	A vendor sent an invoice, especially if you're buying stock or paying later.	You've paid on the spot for something small. Use an expense.
Record payment	You paid all or part of a recorded bill.	There's no bill yet.

FEATURE	USE IT WHEN	DON'T USE IT WHEN
Expense	You paid straight away for something like fuel, rent or bank charges.	You're buying tracked stock. Expenses don't add to stock, so use a bill.
Paid by the owner	The owner paid an expense personally. Choose the owner's equity account under Paid from.	The company paid. Choose its bank or cash account.

Items and stock

Create one item for each product or service you sell. Its description, price and tax code fill in on each line.

CHOICE	USE IT WHEN
Goods, stock tracked	You hold physical stock and want quantities and cost of goods sold updated automatically.
Goods, not tracked	You sell a physical product but don't count it.
Service	You sell work or time. Its lines can show start and end dates.
HSN or SAC code	You're in India. Save the code on the item, because invoice lines don't ask for it.
Opening stock	You already hold the goods when you start using JS HUB.

Banking and accounting

Use Banking for money moving through your accounts, and a manual journal only when no other feature fits.

FEATURE	USE IT WHEN	DON'T USE IT WHEN
Transfer	Money moved between two of your own accounts, such as bank to petty cash.	Money went to a vendor or came from a customer. Record a payment.

FEATURE	USE IT WHEN	DON'T USE IT WHEN
Reconcile	You have a bank statement and want to confirm your books match it.	You're still changing those entries.
Chart of accounts	You need a new category, like a specific expense type.	You just want to label a single transaction. Use its description.
Manual journal	You're recording owner capital, depreciation, accruals or a correction.	It's a sale, purchase or stock movement.

Reports and tax

Pick the report by the question you're asking.

QUESTION	REPORT
Did we make a profit in this period?	Profit & loss
What do we own and owe on this date?	Balance sheet
How much stock do we have, and what is it worth?	Stock summary
What did we spend, and on what?	Expense report
How much VAT do we owe this UAE tax period?	VAT return

Have your accountant review a tax report before you file it. JS HUB prepares the figures, and filing them is up to you.

Common mix-ups

These four choices cause the most confusion.

CHOOSING BETWEEN	USE THE FIRST WHEN	USE THE SECOND WHEN
Quote or invoice	The customer hasn't agreed yet	The customer owes you

CHOOSING BETWEEN	USE THE FIRST WHEN	USE THE SECOND WHEN
Bill or expense	A vendor invoiced you, you'll pay later, or it's stock	You've already paid and it isn't tracked stock
Void or credit note	The invoice shouldn't exist at all	The invoice was valid but needs reducing or refunding
Transfer or manual journal	Money moved between your own accounts	You're recording something else, like capital or depreciation

What each step does to your books

You never type these entries. The app posts them when you take the step.

STEP	DEBIT (GOES UP, OR OWED TO YOU)	CREDIT (COMES FROM, OR YOU OWE)	ALSO HAPPENS
SALES			
Quote, invoice draft	Nothing posted		A quote can convert to an invoice draft, keeping its lines and service dates.

Issue invoice	`Customers owe you`
	`Cost of goods sold`
		`Sales`
		`Tax payable`
		`Inventory`
			Tracked stock goes down. The app stops you if there isn't enough stock.

Receive payment	`Bank or cash`	`Customers owe you`	Invoice becomes part paid or paid.
Issue credit note	`Sales` `Tax payable`	`Customers owe you`	Applied to the invoice. Can return goods to stock at cost.
Refund a credit	`Customers owe you`	`Bank or cash`	Credit note closes once fully used.
PURCHASES			

STEP	DEBIT (GOES UP, OR OWED TO YOU)	CREDIT (COMES FROM, OR YOU OWE)	ALSO HAPPENS
Bill draft	Nothing posted		A vendor's bill number can only be entered once, which helps prevent paying twice.
Record bill	`Inventory or expense` `Tax recoverable`	`You owe vendors`	Tracked stock goes up and its average cost updates.
Make payment	`You owe vendors`	`Bank or cash`	Bill becomes part paid or paid.
Record expense	`Expense account` `Tax recoverable`	`Bank, cash or owner's equity`	Use for spending with no bill, like fuel or bank charges.
OTHER MONEY			
Bank transfer	`Receiving account`	`Sending account`	Total cash and bank doesn't change.
Manual journal	The accounts you choose, which must balance		For owner capital, depreciation and corrections. Customer, vendor and stock balances can't be changed this way.

Your regular routine

- **Daily:** issue invoices, record bills and expenses, and enter money in and out.
- **Weekly:** check unpaid invoices to chase customers, unpaid bills to plan payments, and the stock summary to see what to reorder.
- **Monthly:** reconcile each bank account against its statement. Reconciled entries lock.

Fixing mistakes

- **Drafts:** edit or delete them freely.
- **Issued invoices and recorded bills:** void them. The app posts a reversing entry and keeps the original for your records.
- **If it has payments or credits:** delete the payments first. On an invoice, also void its credit notes first.
- **Reducing or refunding a valid sale:** issue a credit note instead of voiding.

- **Each tax period:** in the UAE, prepare the VAT return from Reports and have your accountant review it before you file.
